Unique Selling Features
of our Waste and
Recyclable Material
Packaging System RBS-2

Unique Selling Features of our RBS-2

Substantial reduction of waste volume by approx. 40 - 70 %, therefore significant savings of transport and storage costs.

Easy outdoor storage. By the use of UV resistance film, outdoor storage is possible as long as warranted by the film manufacturer. Additional extension of storage time by covering the bale storage with fleece, film or soil.

No use of nets or wire, results in substantial savings of packaging costs. Easier opening of bales.

Bale height adjustable from 1.20 m to 1.60 m, thus adaption of bales to the transport vehicle, optimal use of load volume and reduction of transport costs. Fix bale diameter of 1.50 m.

Good storage and grabbing suitability by round bale shape. The trapezoid hollow space between the bales enables the load arm of the bale gripper to grab the bales without causing any dama-

Film-wrapping via cross bracing, thus the material is packed air- and waterproof. No odour nuisance, no leakage water. Prevention of spontaneous ignition inside the bales. Preservation of physical characteristics of the packed material until further utilization.

Standard 40" container inclusive standardized container mountings.

Operating room inside the machine. For an additional charge, with air-conditioning available.

Fully automatic packaging process.
